**ABSTRACT**

There are a number of forms of industrial pollution. One of the most common is water pollution, caused by dumping of industrial waste into waterways, or improper containment of waste, which causes leakage into groundwater and waterways. Industrial pollution can also impact air quality, and it can enter the soil, causing widespread environmental problems. This paper analyzes the Environmental impact and health impact of water pollution in Tirupur Industrial Region in Tamil Nadu. It outlines the environmental indicators and health indicators of water pollution and they are measured on the basis of 5 point rating scale. This paper concludes with some interesting findings.

**KEYWORDS:** water pollution, diseases, drinking water, illnesses
