<sup>2</sup>Associate Professor, Department of Psychology, Karnatak University, Dharwad, Karnataka, India

### **ABSTRACTS**

**A**cademic achievement is one of the major goals, which the youth are expected to pursue in all cultures. It is cherished as a desirable value by all sections of our society. Study is matter of governing will of accepting a right purpose and concentrating one's energies towards its achievement. Study habit one's own effort is needed for such a gaining of knowledge and understanding. The aim of the present study is to investigation the academic achievement of postgraduate Arts and Science students. 200 P.G. Students studying in social science and science in various departments in Karnatak University constituted the sample for the study. The coefficient of correlation was found to be 0.6 between odd and even. 't' test is used to know the significant difference between arts and science students. The results show that there is a significant difference between male and female students in academic achievement and study habits among science and arts students.
